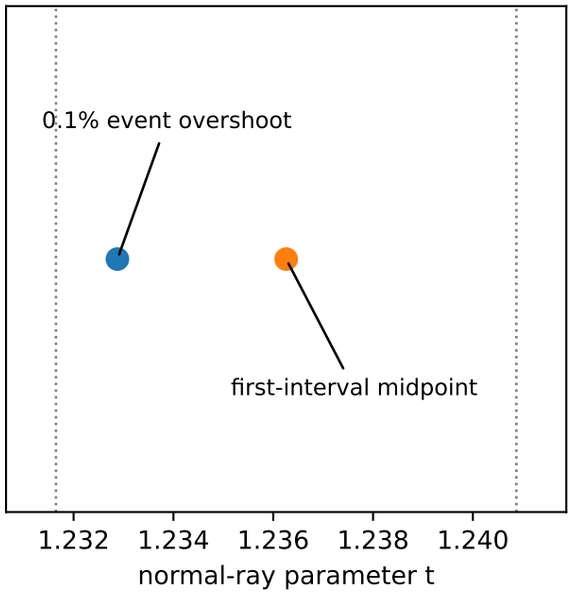
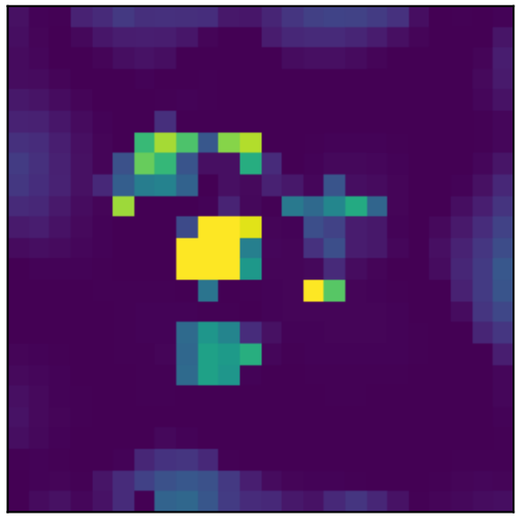
Exposed B__r12_confirm24_0010: material shadow alone does not determine the future

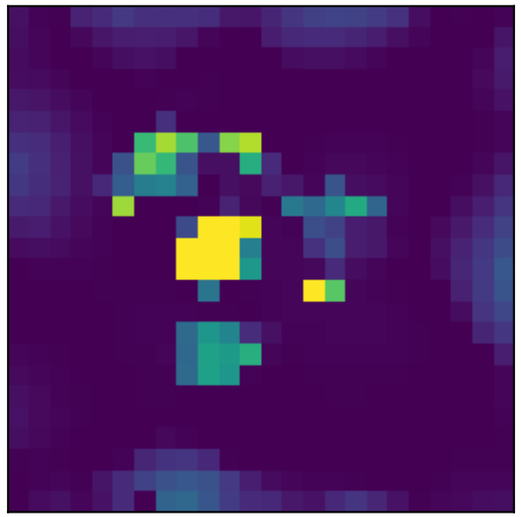
Both cross the same first event



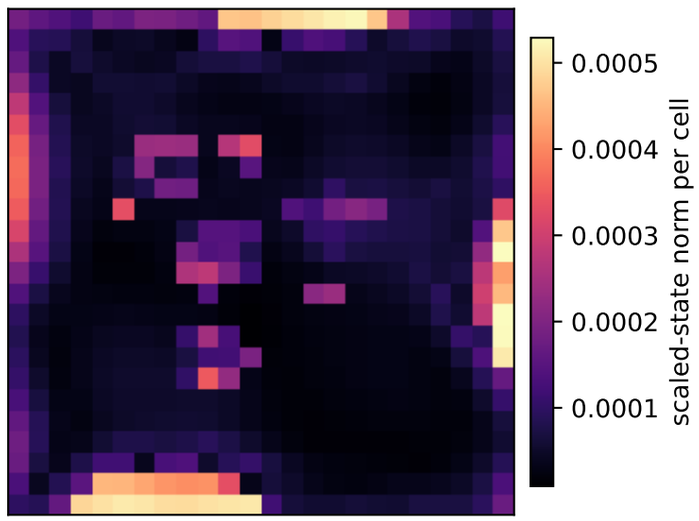
Event overshoot material shadow



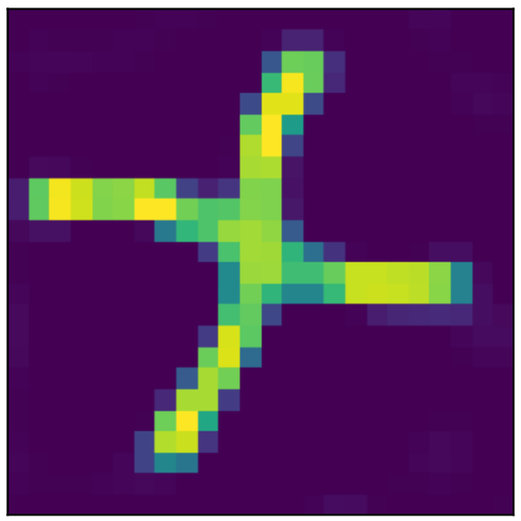
Midpoint material shadow



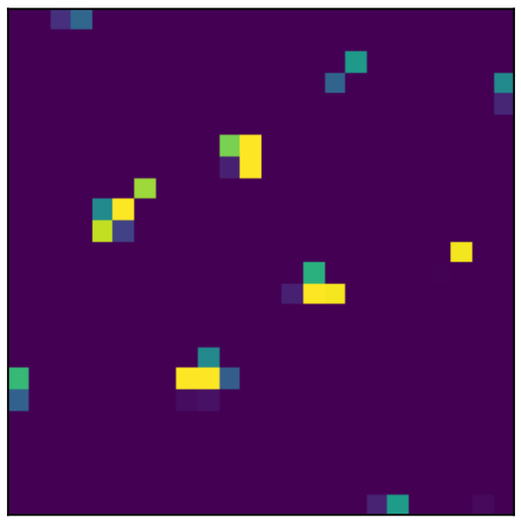
Cellwise full-state difference
relative Frobenius distance = 0.0552%

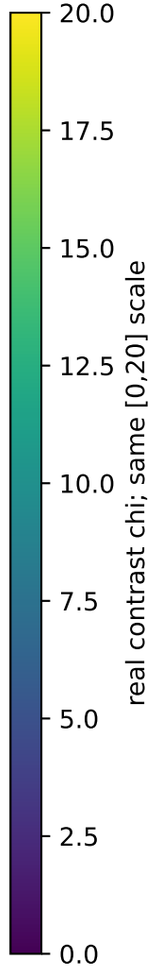


Future paid primary
residual / delta = 0.957



Future paid primary
residual / delta = 30.080





Max material-shadow difference = 9.64e-14. Same reference arrays; no GT used here.
Different subsequent full-state paths; this is not a material nonuniqueness or chaos theorem.
