MAX-STRUCT-R3 | formula-derived physical mechanism controls
One physical disk: a circular response arc
Im observed scattered field
Re observed scattered field
true m=1.2 / rational + CIE readout
local optimizer: m=20
Radiation passivity does not remove a box trap
normalized data objective
real material contrast m
interior maximum 16.8795
constrained local minimum
global data minimum
3D: rank-one dyad vs rank-three isotropic cell
relative singular value
response-change singular value index
dyad
isotropic
8-cell finite vector DDA; no imaging/continuum claim
Existing 6-cell material fiber: altered data separate
absolute full-port pair gap
Old near-equality is numerical, not a new exact certificate
old data
common added loss
