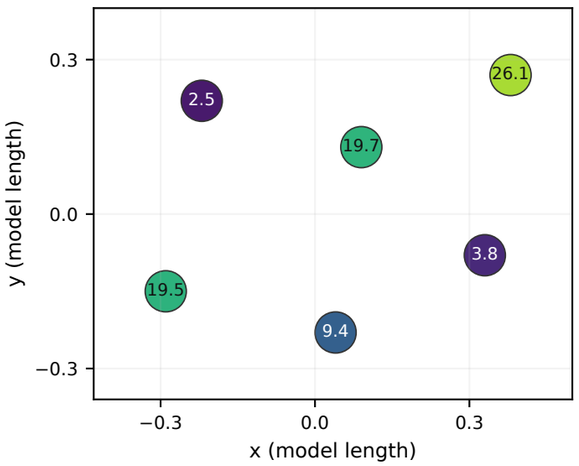
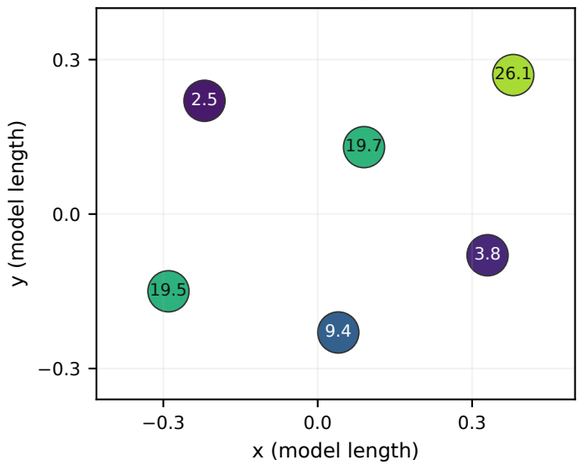
Blind six-cell material recovery: an additional, distinct real material fits the same observations
All returned physical roots shown; labels preserve solver order. GT used only after the frozen prediction set was scored.

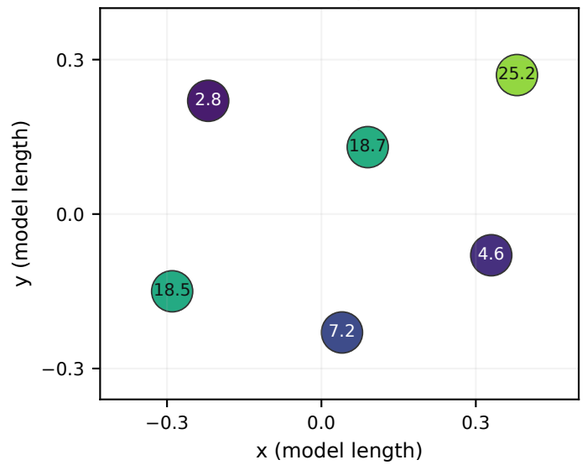
(a) Target 00: hidden truth
Postscore display; six independent unknowns



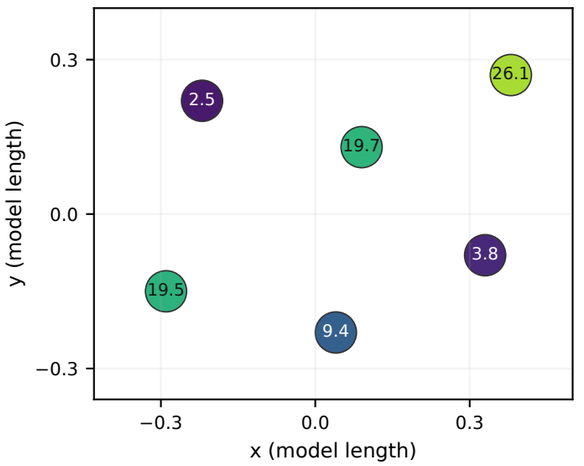
(b) Quotient root 1 — returned order
data residual 1.9e-14 | GT RMS 7.38e-13



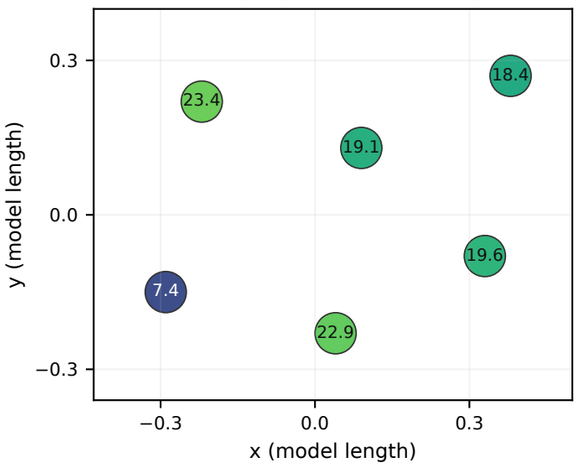
(c) Quotient root 2 — returned order
data residual 1.7e-14 | GT RMS 1.16e+00



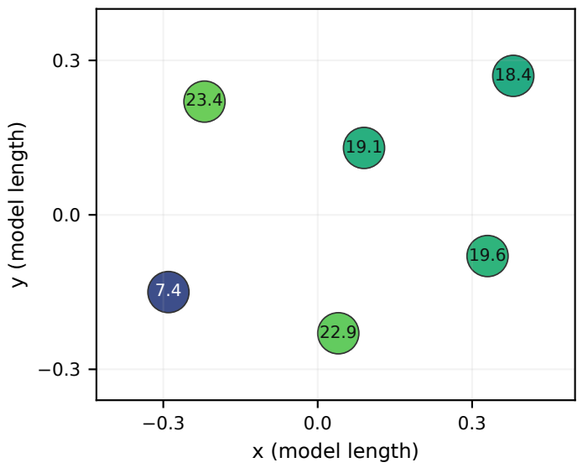
(d) Reduced Full-J: one returned root
data residual 5.9e-16 | GT RMS 1.17e-13



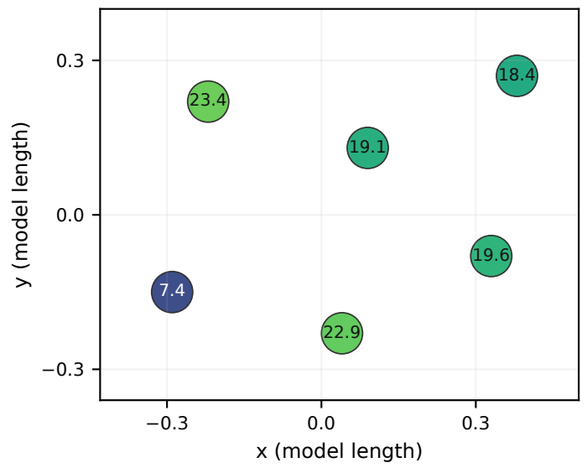
Target 01: hidden truth
Postscore display; same frozen geometry



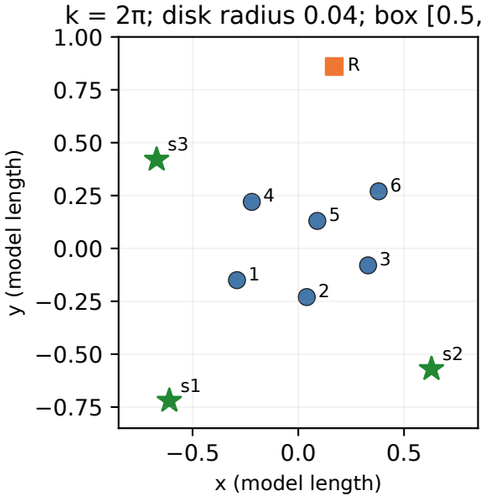
Quotient: one returned physical root
data residual 1.6e-14 | GT RMS 1.29e-12



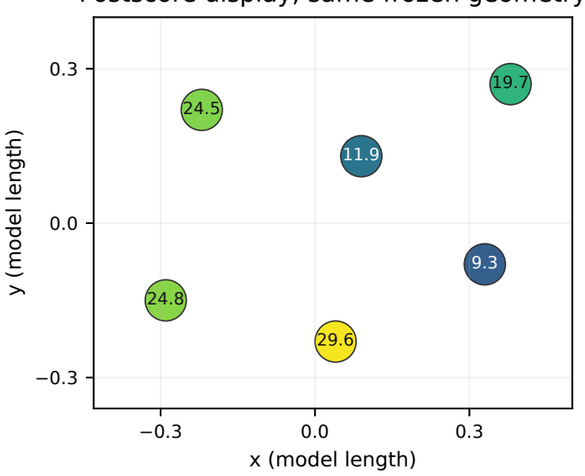
Reduced Full-J: one returned root
data residual 6.2e-16 | GT RMS 1.63e-13



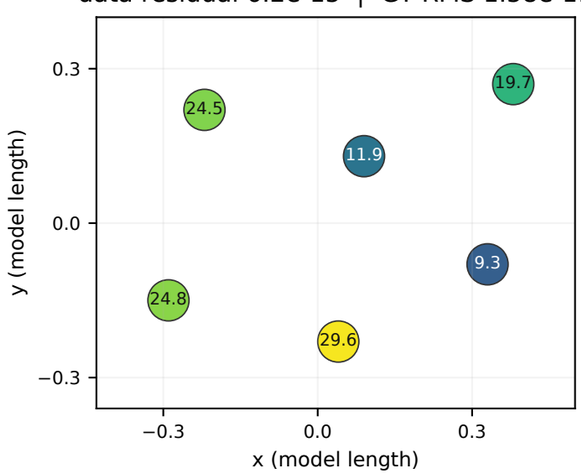
Frozen acquisition: 6 unknowns, 6 real data
k = 2π; disk radius 0.04; box [0.5, 30]



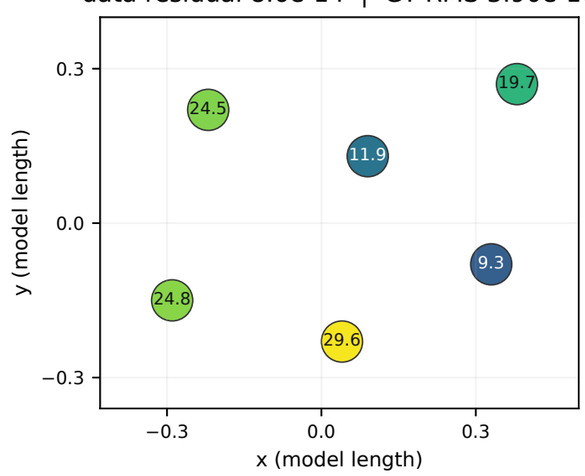
Target 02: hidden truth
Postscore display; same frozen geometry

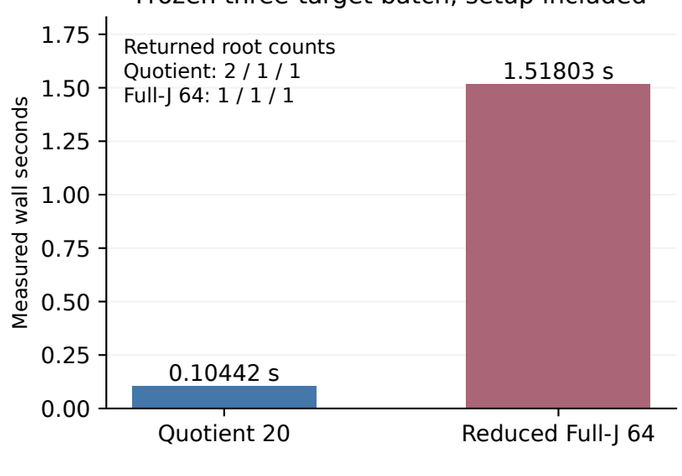


Quotient: one returned physical root
data residual 6.2e-15 | GT RMS 1.58e-11



Reduced Full-J: one returned root
data residual 8.6e-14 | GT RMS 3.90e-10





Frozen three-target batch, setup included
