R11 global/local dissipative control on the same R10 paths
192 amplitude nodes per arm; full residual gates use the actual observed data
A Fixed propagation space remains inaccurate
Whitened response error / bound
Fixed Green-space rank
Actual port error
Global bound
Local bound
White-error gate = 0.01
B Conservative, but not the only failure
Bound on the same error
Actual rank-128 white error
Global bound
Local bound
Bound = actual
C Failures also occur without support birth
Shape mean actual rank-128 white error
Newly active ROI cells relative to anchor
24 shapes, grouped within 8 exposed parents
