A/B/C disclosed branch diagnostics: ||Delta E_ports|| / sigma, sigma=.001
Deterministic complex Frobenius balls; C is prediction only, unit ideal-channel coefficient power
Exact zeros are text annotations, omitted from logarithmic data; no display-floor values are inserted
Old-source ports
m=72; r=8.49; 2r=17
A: added-receiver data only
m=144; r=12; 2r=24
B: unitary old-source mix
m=72; r=8.49; 2r=17
C: new-source prediction
m=36; r=6; 2r=12

Stored nonzero gap
Noise-ball radius r = sqrt(m)
Two equal noise balls disjoint if gap > 2r
