Old-bank replay: target quality, actual queries, and consensus failure evidence
Parent means after two noise repeats
Target TV (linear below 1e-6)
Parent index
Response interpolation
Anchor-weighted contrast
Sampled consensus
Target TV gate .02
Absolute error remains separate from regret
Position RMSE / lambda0
Full finite reference
Response interpolation
Anchor contrast
Sampled consensus
Logical queries per case; replay only
Logical atom queries
New FE / RHS = 0 / 0
Historical bank: 2950 FE + 11800 RHS
